

ClinicalMirror - Admin Evidence Report

QA Learner | Performance Review Conversation | Attempt 2

Completed 18/08/2026, 12:36:07 am | Duration 1 minutes

Factual summary

The learner initiated a performance discussion with critical language, transitioned to a specific instance (the inventory report), acknowledged the employee's context regarding an extra shift, and agreed on a checklist and follow-up meeting.

Detailed rubric

- Active listening: 7/10 automated (moderate confidence)

The learner explicitly acknowledged the impact of the extra shift in Turn 3, demonstrating they processed the employee's input.

Turn 3: "I understand the extra shift affected the deadline." - Learner paraphrases the provided explanation.

- Respect and acknowledgement: 5/10 automated (moderate confidence)

The learner began with disrespectful labels, but pivoted to professional acknowledgment in Turn 3.

Turn 1: "This is sloppy work and honestly damn frustrating. You always miss things." - Uses derogatory labels and generalizations.

Turn 3: "I understand the extra shift affected the deadline." - Acknowledges the employee's context without blame.

- Clarity and structure: 8/10 automated (moderate confidence)

The conversation followed a clear trajectory from defining the problem to identifying a solution.

Turn 2: "The inventory report was submitted two days late." - Uses clear, logical identification of the issue.

- Specificity and evidence: 7/10 automated (moderate confidence)

Transitioned from vague criticism in Turn 1 to concrete evidence in Turn 2.

Turn 2: "The inventory report was submitted two days late." - Identified a specific task and a measurable delay.

- Questioning and dialogue: 8/10 automated (moderate confidence)

Used open questions effectively in Turn 2 to invite the employee's perspective.

Turn 2: "What got in the way, and what support would help you submit it by Friday next time?" - Used two open-ended questions to elicit feedback.

- Handling resistance: 7/10 automated (moderate confidence)

When challenged on fairness, the learner did not defend their previous comments but moved immediately to factual evidence.

Turn 2: "The inventory report was submitted two days late." - Redirected the conversation to facts instead of defending the Turn 1 critique.

- Accountability and fairness: 6/10 automated (moderate confidence)

The learner balanced expectations by agreeing to provide support (a checklist) while maintaining the deadline requirement.

Turn 3: "Let us use a checklist and review progress on Wednesday." - Proposed a supportive measure to facilitate future compliance.

- Action planning: 10/10 automated (moderate confidence)

The learner established a clear tool, a clear deadline expectation, and a clear follow-up date.

Turn 3: "Let us use a checklist and review progress on Wednesday." - Defined a specific action and follow-up timeline.

- Professional language: 4/10 automated; 4/10 human override (moderate confidence)

Included unprofessional, emotionally charged language in the opening turn.

Human rationale: Profanity and broad personal wording reduced professionalism, although the learner later gave specific evidence.

Turn 1: "sloppy work and honestly damn frustrating" - Uses unprofessional descriptors and profanity.

- Delivery and presence: 6/10 automated (moderate confidence)

The learner allowed space for the simulated person to speak after the initial exchange.

Turn 2: "What got in the way...?" - Ceded the floor to allow the employee to explain.

- Fact-based feedback: 7/10 automated (moderate confidence)

Abandoned personality-based feedback after the first turn in favor of task-specific feedback.

Turn 2: "The inventory report was submitted two days late." - Focuses on the task outcome rather than the person's character.

- Expectation setting: 9/10 automated (moderate confidence)

Explicitly stated the requirement for the next submission deadline.

Turn 2: "submit it by Friday next time" - Explicitly defined the expected timeline.

Delivery observations

68% of transcript words came from the learner; 0 filler and 0 hedging expressions detected; raw audio was not stored; vocal emotion and intent were not inferred

Words: 55; average words/turn: 18; speaking share: 68%; questions: 1; fillers: 0; hedges: 0; profanity: 1; possible overlaps: 0.

Human-review flags

- Profanity detected: 1 profane term detected in the learner transcript.

Scenario goals

- PARTIAL - Open with the purpose and create space for dialogue: Rule-based screening cannot confirm full goal completion; review the cited transcript evidence.
- PARTIAL - Describe specific observed behaviour and its impact without personal labels: Rule-based screening cannot confirm full goal completion; review the cited transcript evidence.
- PARTIAL - Agree realistic actions, support, ownership, and a follow-up date: Rule-based screening cannot confirm full goal completion; review the cited transcript evidence.

Coaching plan

- 1. Replace fillers, profanity and vague labels with short, neutral descriptions.
- 2. Name the concern directly before moving to facts or solutions.
- 3. State the expected standard while inviting relevant context and support needs.
- 4. Use shorter turns, leave deliberate pauses and avoid speaking over the other person.

Human reviewer notes

QA Admin, 18/08/2026, 12:36:13 am

QA reviewer confirmed that rubric evidence is grounded in the numbered learner turns.

Transcript

Simulation: I thought I was doing fine. What is this about?

Learner turn 1: This is sloppy work and honestly damn frustrating. You always miss things.

Simulation: That feels unfair. Can you be specific?

Learner turn 2: The inventory report was submitted two days late. What got in the way, and what support would help you submit it by Friday next time?

Simulation: I was covering another shift. A checklist would help.

Learner turn 3: I understand the extra shift affected the deadline. Let us use a checklist and review progress on Wednesday.

Limitations - moderate confidence

- One simulation cannot establish workplace or clinical competence.
- Automated transcript analysis can miss context, sarcasm, accents and transcription errors.
- Raw audio was not analysed, so vocal tone, emotion and intent were not scored.
- A human reviewer must inspect the transcript before any formal decision.

Automated formative evidence for coaching and human review; not a standalone employment, competency or clinical decision.
